Teesweb specialise in scalable solutions which can grow and extend as the customer requires.

We develop e-commerce sites using software which is easy for the end user such as Actinic Catalog and X-Cart which we integrate the clients agreed unique design. Therefore producing a completely one off e-commerce store with an easy to use interface to update products, change prices and grow the business.

All e-commerce packages provide the client with reporting functions to compare data over time such as sales etc. Teesweb also supply full training in the use of the applications once the site is complete.

As standard we write our code to compliant standards using Semantic code to be completely search engine friendly, avoiding the use of tables in the layout (which reduces performance on the site as well as results in the search engines) We also ensure the whole site is setup correctly with the correct use of meta data and page titles. We don't want our clients to have a great website that is never found by the major search engines.

Website Development:

From custom built database driven sites through to basic brochure page websites, Teesweb is happy to work on all projects large or small. Dependant on the needs of the client we can provide the client with a CMS (Content Management System) to enable the client to update the content on the site with no web design or coding knowledge.

Search Engine Optimisation:

We also offer Search Engine Optimisation as an ongoing monthly service, this service involves our team building relationships with hundreds of other websites and generating inbound links to your site from relevant Search Engines, Directories, Social Bookmarking Sites, Social Networking Sites and Basic Websites. We also do keyword research, page analysis and onsite optimisation.

Teesweb only ever practice 'White Hat' techniques to ensure your site is never going to be at risk of being banned or dropped by the major search engines. (Black Hat techniques involve trying to trick the search engines with unethical methods)

Bespoke Software Development:

If you have a need for any kind of web based application, Teesweb are happy to discuss your needs, we have developed stand alone applications for Amazon for processing invoices to online appointment applications for hairdressers and consultants. We have a team of top programmers available to build your project.
